AMENDMENTS TO THE CLAIMS

Please amend claims 1, 6, 12 and 18 as detailed below.

1   1.   (currently amended) A data sharing method comprising:

2   designating a first user as an eligible shared data contributor;

3   designating an authorized service component of said eligible shared data

4 contributor as a shared data publishing component;

5   defining a data publication;

6   tagging data managed by said publishing component for inclusion in said

7 data publication;

8   designating a second user as an eligible shared data subscriber;

9   associating said second user as a subscriber of said data publication;

10   .   contributing to said data managed by said publishing component by said

11 shared data contributor; and

12   facilitating access to said data managed by said publishing component based

13 on said second user's subscription to said data publication, with which said ~~said~~

14 <u>data</u> managed by said publishing component is tagged for inclusion.

1   2.   (original) The method of claim 1, wherein said defining comprises assigning a

2 publication identifier for said data publication, and said tagging comprises assigning

3 said assigned publication identifier to a component property of said publishing

4 component.

1   3.   (original) The method of claim 1, wherein said method further comprises

2 designating said data publication as a data publication available for subscription by

Glassco et al. – M&A For Managing   4   Attorney Docket No. 109886-130205
Publication and Sharing Data   AKP
SEA/109886/130205/AKP/314917.1

3   eligible shared data subscribers of an organization, of which said second user is a

4   member.

1   4.   (original) The method of claim 3, wherein said first user is also a member of

2   said organization.

1   5.   (original) The method of claim 3, wherein said first user is not a member of

2   said organization.

1   6.   (currently amended) The method of claim 1, wherein said method further

2   comprises determining data said second user is authorized to access when ~~initialing~~

3   <u>initializing</u> a session environment for said user or when instantiating a requested

4   component, and said determining includes resolving said second user's subscription

5   of said data publication to said publishing component.

1   7.   (original) The method of claim 6, wherein said defining comprises assigning a

2   publication identifier for said data publication, and said tagging comprises assigning

3   said assigned publication identifier to a component property of said publishing

4   component, and said resolution is made through said publication identifier.

1   8.   (original) A data sharing method comprising:

2   designating a user as an eligible shared data contributor;

3   designating an authorized service component of said eligible shared data

4   contributor as a shared data publishing component;

5   defining a data publication;

6   tagging data managed by said publishing component for inclusion in said

7   data publication to facilitate sharing of data managed by said publishing component

8   with other users through said other users' subscription to said data publication; and

9   contributing to said data managed by said publishing component by said

10   shared data contributor.

1   9.   (original) The method of claim 8, wherein said defining comprises assigning a

2   publication identifier for said data publication, and said tagging comprises assigning

3   said assigned publication identifier to a component property of said publishing

4   component.

1   10.   (original) A data sharing method comprising:

2   designating a user as an eligible shared data subscriber;

3   associating said user as a subscriber of a data publication including data

4   managed by a publishing component; and

5   facilitating access to said data managed by said publishing component based

6   on said user's subscription to said data publication, with which said data managed

7   by said publishing component is tagged for inclusion.

1   11.   (original) The method of claim 10, wherein said user is a member of an

2   organization, and said method further comprises designating said data publication

3   as available for subscription by eligible shared data subscriber users of said

4   organization.

1   12.   (currently amended) The method of claim 10, wherein said method further

2   comprises determining data said user is authorized to access when ~~initialing~~

Glassco et al. – M&A For Managing   6   Attorney Docket No. 109886-130205
Publication and Sharing Data   AKP
SEA/109886/130205/AKP/314917.1

3   initializing a session environment for said user or when instantiating a requested

4   component, and said determining includes resolving said user's subscription of said

5   data publication to said publishing component.

1   13.   (original) The method of claim 12, wherein said data publication is assigned a

2   publication identifier and a property of said service component is also assigned with

3   said publication identifier; further, said resolution is made through said publication

4   identifier.

1   14.   (original) An apparatus comprising:

2   storage medium having stored therein a plurality of programming instructions

3   designed to facilitate

4   designation of a user as an eligible shared data contributor,

5   designation of an authorized service component of said eligible shared

6   data contributor as a shared data publishing component,

7   definition of a data publication,

8   tagging of data managed by said publishing component for inclusion in

9   said data publication to facilitate sharing of data managed by said

10   publishing component with other users through said other users'

11   subscription to said data publication, and

12   contribution to said data managed by said publishing component by said

13   shared data contributor; and

14   one or more processors coupled to said storage medium to execute said

15   programming instructions.

1   15.   (original) The apparatus of claim 14, wherein said programming instructions

Glassco et al. – M&A For Managing   7   Attorney Docket No. 109886-130205
Publication and Sharing Data   AKP
SEA/109886/130205/AKP/314917.1

2   are designed to facilitate said definition of a data publication by assigning a

3   publication identifier for said data publication, and said tagging by assigning said

4   assigned publication identifier to a component property of said publishing

5   component.

1   16.   (original) An apparatus comprising:

2   storage medium having stored therein a plurality of programming instructions

3   designed to facilitate

4   designation of a user as an eligible shared data subscriber,

5   association of said user as a subscriber of a data publication including

6   data managed by said publishing component, and

7   access to said data managed by said publishing component based on

8   said user's subscription to said data publication, with which said data

9   managed by said publishing component is tagged for inclusion; and

10   one or more processors coupled to the storage medium to execute the

11   programming instructions.

1   17.   (original) The apparatus of claim 16, wherein said user is a member of an

2   organization, and said programming instructions are further designed to facilitate

3   designation of said data publication as available for subscription by eligible shared

4   data subscriber users of said organization.

1   18.   (currently amended) The apparatus of claim 16, wherein said programming

2   instructions are further designed to determine data said user is authorized to access

3   when ~~initialing~~ Initializing a session environment for said user or instantiating a

4   requested component, including resolution of said user's subscription of said data

5   publication to said publishing component.

1   19.   (original) The apparatus of claim 18, wherein said programming instructions

2   are further designed to assign said data publication a publication identifier, and

3   assign the same publication identification to a property of said service component;

4   further, to perform said resolution through said publication identifier.

1 · 20.   (original) An apparatus comprising:

2   storage medium having stored therein a plurality of programming instructions

3   designed to facilitate

4   designation of a user as an eligible shared data contributor,

5   designation of an authorized service component of said eligible shared

6   data contributor as a shared data publishing component,

7   defining a data publication

8   tagging data managed by said publishing component for inclusion with said

9   data publication,

10   designation of a user as an eligible shared data subscriber,

11   association of said user as a subscriber of a data publication,

12   contribution to data managed by said publishing component by said

13   associated shared data contributor, and

14   access to said data managed by said publishing component based on said

15   user's subscription to said data publication, with which said data

16   managed by said publishing component is tagged for inclusion; and

17   one or more processors coupled to said storage medium to execute said

18   programming instructions.

1   21.   (withdrawn) A data sharing method comprising:

2   facilitating authorization of members of a plurality of data sharing entities to

3   access a plurality of methods of a service component by a first user; and

4   conditionally permitting a second user to invoke a first of said methods in

5   accordance with whether said second user as a member of one of said plurality of

6   data sharing entities is authorized to invoke said first method.

1   22.   (withdrawn) The method of claim 21, wherein said data sharing entities

2   comprise a user group of which said first and second users are members, and said

3   facilitating comprises facilitating implicit authorization of said second user, by said

4   first user, to invoke said first method by authorizing all members of said user group

5   to invoke said first method.

1   23.   (withdrawn) The method of claim 21, wherein said data sharing entities

2   comprise an organization having one or more user groups, and said first user as

3   well as said second user are members of said organization, further, said facilitating

4   comprises facilitating implicit authorization of said second user, by said first user, to

5   invoke said method by authorizing all members of said organization to invoke said

6   method.

1   24.   (withdrawn) The method of claim 21, wherein said data sharing entities

2   comprise an enterprise having one or more organizational units, and said first user

3   as well as said second user are members of said enterprise, further, said facilitating

4   comprises facilitating implicit authorization of said second user, by said first user, to

5   invoke said method by authorizing all members of said enterprise to invoke said

Glassco et al. – M&A For Managing   10   Attorney Docket No. 109886-130205
Publication and Sharing Data   AKP
SEA/109886/130205/AKP/314917.1

6 method.

1 25. (withdrawn) The method of claim 21, wherein said data sharing entities
2 comprise an universal data sharing entity of which said first user and said second
3 user are members, said facilitating comprises facilitating implicit authorization of said
4 second user, by said first user, to invoke said method by authorizing all members of
5 said universal data sharing entity to invoke said method.

1 26. (withdrawn) The method of claim 21, wherein said methods comprise at least
2 a selected one of a method to obtain data, a method to store data, and a method to
3 perform a predetermined execution using at least data managed by said
4 component.

1 27. (withdrawn) The method of claim 21, wherein said method further comprises
2 said first user selectively authorizing himself/herself to perform one or more of
3 invoking a first method of said component to obtain data, invoking a second method
4 of said component to store data, and invoking a third method of said component to
5 perform a predetermined execution using at least data managed by said
6 component.

1 28. (withdrawn) The method of claim 21, wherein said facilitating comprises
2 determining a security property value representative of authorization given to said
3 members of said data sharing entities.

1 29. (withdrawn) The method of claim 28, wherein said determining comprises

2 determining a binary representation for authorization given to members of one of

3 said data sharing entities.

1 30. (withdrawn) The method of claim 29, wherein said determining further

2 comprises converting a binary representation representative of authorization given

3 to members of one of said data sharing entities to a decimal representation.

1 31. (withdrawn) The method of claim 30, wherein said determining further

2 comprises concatenating a plurality of decimal representations to generate said

3 security property value.

1 32. (withdrawn) The method of claim 21, wherein said conditionally permitting

2 comprises determining whether said second user is a member of said plurality of

3 data sharing entities whose members have been authorized to share said data by

4 said data contributor.

1 33. (withdrawn) The method of claim 32, wherein said determining comprises

2 examining a security property value representative of authorizations given to

3 members of one or more data sharing entities.

1 34. (withdrawn) An apparatus comprising:

2 storage medium having stored therein a plurality of programming instructions

3 designed to

4   facilitate authorization of members of a plurality of data sharing entities to

5   access a plurality of methods of a service component by a first user,

6   and

7   conditionally permit a second user to invoke a first of said methods in

8   accordance with whether said second user as a member of one of said

9   plurality of data sharing entities is authorized to invoke said first

10   method;

11   one or more processors coupled to said storage medium to execute said

12   programming instructions.

1   35.   (withdrawn) The apparatus of claim 34, wherein said data sharing entities

2   comprise a user group of which said first and second users are members, and said

3   programming instructions are further designed to facilitate implicit authorization of

4   said second user, by said first user, to invoke said first method by authorizing all

5   members of said user group to invoke said first method.

1   36.   (withdrawn) The apparatus of claim 34, wherein said data sharing entities

2   comprise an organization having one or more user groups, and said first user as

3   well as said second user are members of said organization, further, said

4   programming instructions are further designed to facilitate implicit authorization of

5   said second user, by said first user, to invoke said method by authorizing all

6   members of said organization to invoke said method.

1   37.   (withdrawn) The apparatus of claim 34, wherein said data sharing entities

2   comprise an enterprise having one or more organizational units, and said first user

3   as well as said second user are members of said enterprise, further, said

4   programming instructions are further designed to facilitate implicit authorization of

5   said second user, by said first user, to invoke said method by authorizing all

6   members of said enterprise to invoke said method.

1   38.   (withdrawn) The apparatus of claim 34, wherein said data sharing entities

2   comprise an universal data sharing entity of which said first user and said second

3   user are members, said programming instructions are further designed to facilitate

4   implicit authorization of said second user, by said first user, to invoke said method

5   by authorizing all members of said universal data sharing entity to invoke said

6   method.

1   39.   (withdrawn) The apparatus of claim 34, wherein said methods comprise at

2   least a selected one of a method to obtain data, a method to store data, and a

3   method to perform a predetermined execution using at least data managed by said

4   component.

1   40.   (withdrawn) The apparatus of claim 34, wherein said programming

2   instructions are further designed to facilitate said first user selectively authorizing

3   himself/herself to perform one or more of invoking a first method of said component

4   to obtain data, invoking a second method of said component to store data, and

5   invoking a third method of said component to perform a predetermined execution

6   using at least data managed by said component.

1   41.   (withdrawn) The apparatus of claim 34, wherein said programming

2   instructions are further designed to determine a security property value

3   representative of authorization given to said members of said data sharing entities.
